Abstract: *Chloris viridula* (L.) Gauss. (Poaceae) is a common grass species in the tropics and subtropics. It is a major forage crop for livestock. The present study was conducted to evaluate the nutritive value of *Chloris viridula* forage. The forage was made from the leaves and stems of the plant. The forage was evaluated for its nutritive value using a series of chemical analyses. The results showed that the forage had a high crude protein content (18.5%) and a high digestibility coefficient (0.75). The forage was found to be a good source of energy and protein for livestock. The study concluded that *Chloris viridula* forage is a suitable feed for livestock.
