- 2 Ronstan double sheave organizer
- 4 Ronstan rope stopper
- Folding rudder and extension
- Storage compartment under cockpit

Comfort. Efficiency. Performance.

ECHO 38 TUG

F&A YACHTING 
New vision of your *life*

Comfortable live-aboard.

Solid construction, thoughtful interior,
fast semi-displacement hull with hard chine and full keel...
these are ingredients for an unrivalled classic cruising vessel.

The **style** of the hull is traditional elliptical stern tug above the waterline combined with a trawler-yacht underbody of much lighter displacement than would be found on a working tug. The superstructure is a blend of a traditional tug pilothouse with a deckhouse needed for the accommodation.

Hull **construction** is fiber-glass and the deck is teak. The cockpit construction is wood and it is covered by epoxy composite.

The **accommodation** is comfortable to live aboard with occasional sleep-aboard guests. The owners' stateroom is forward of the pilothouse from which it can be closed off by doors. It comprises V-berths, a seat, a head with basin and shower, many lockers and access to the forepeak.

The **saloon** is open to the galley and comprises a central table with bottle stowage and hinged leaves and settee port and starboard. The settee backrests hinge upward to form upper and lower berths or to give access to the lockers behind. The fresh water tanks are built in under the settees.

The **pilothouse**, over the engine space, houses all the controls in a central console. Alongside the console are lift-top chart lockers and a navigation area with drawers below. Behind the helm position is a short (1.85m) berth for the watch during night passages and the saloon stairs. Access to the deck is through sliding doors port and starboard.

Immediately aft of the pilothouse and at a lower level is the gallery to port with large work surfaces, twin sinks, ice box, freezer, refuse bin, drawers, lockers and cooker. To starboard are lockers and a small head compartment.

Through the aft door is the **cockpit** which is covered by an extension of the deckhouse roof. A transom door folds downward to give access to the boarding platform. On the deckhouse roof is a sunning area and the dinghy storage.

The **machinery** space is under the pilothouse and also houses the batteries and fuel tanks. Large hatches in the floor and roof of the pilothouse will permit removal of the engine if needed.

ANATOMY OF ECHO 38 TUG

Easy access to dock from any point aft of wheelhouse door.

Walk-around cabin with hand rails

Radar reflector in removable stack gives return signature equal to that of a 75' steel vessel.

360° view from bridge for unsurpassed visibility.

Optional high-output bow thruster.

Resin coated and painted bulkheads will not rot.

Stainless steel shoe protects running gear.

Interlux Super Fiberglass Bottomcoat Copolymer Epoxy anti-fouling paint (2 coats plus primer).

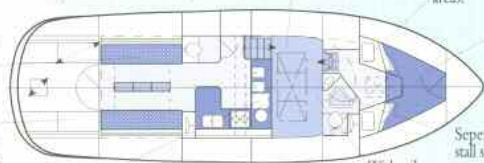

Glass-encapsulated foam stringers give extreme hull stiffness and include fully glassed limber holes to allow drainage to lowest point where it is picked up by pumps.

Water-tight sections in keel minimizes danger of flooding in case of keel damage.

Double large engine hatches (large engine room under).

Storage areas.

V berth with storage under.

Optional side-by-side refrigerator/freezer.

Wide pilot seat with storage under.

Separate stall shower.

Settee with tilt-top moveable table converts to double berth.

Deck box for line and fender storage.
